

NO SALT. NO RUST. ONE STEP.

HT 365™

HT 365 is a preservation coating designed to protect bare steel from corrosion for up to a year depending on environment and place of storage.
Benefits to HT 365:

- A virtually imperceptible thin film coating based on nanotechnology applied at .5 mil dft
- Can be easily applied by spray, brush, rolling or dipping
- HT 365 is naturally attracted to steel and will bond with most exposed alloys
- Film is clear, so steel underneath is visible for the life of the coating
- Single package with no mixing required
- Cures within 5 minutes
- Soft film is not easily disturbed or removed by handling
- Easily removed with high pressure water wash and HoldTight 102
- Can also be used as a lubricant, water displacer, and penetrating fluid
- Excellent salt and humidity protection
- HT 365 works on a variety of metals, including aluminum, nickel, copper, and steel
- Packaged in one-gallon jugs, five-gallon pails, drums and totes
- Also available in aerosol cans

Typical applications or usages for HT 365:

- ✓ Storage of bare steel either indoors or outdoors
- ✓ Transportation of bare steel by truck, ship, rail, etc.
- ✓ Protect bare steel prior to coating to accommodate a change in plans
- ✓ Prevent premature corrosion on unpainted steel parts prior to manufacturing
- ✓ Stored and idle equipment
- ✓ Marine exposed components
- ✓ Moving parts that cannot be protected with a paint, polymer, or epoxy coating
